Software Engineering Technology

About

Alberto has been developing software for over 20 years. Major greenfield and legacy applications for large corporations, white-label mobile apps, and odd jobs making things work in a variety of languages and frameworks decorate his experience with useful perspectives when imagining, producing and maintaining work. With a large breadth of knowledge beyond software he has also managed businesses on many levels from directing the operations and staff of ice rink facilities, supervising set install and back-stage operation of live shows to negotiating feature development, planning and maintenance of production applications. It is always a joy to find the best solutions to serve quality customers and clients.
